Virtual biofeedback game and management system for orofacial rehabilitation, facial nerve paralysis, apraxia, motor speech disorders, dysarthria, lisp and articulation errors. 3D facial recognition and personalized calibration provides accuracy and enables individual customization for target movements and facial disfigurements of any kind.

Game is a great motivator for repetitive tasks, real-time feedback significantly increases awareness about tongue, lip and other face movements in words and syllables.

Online platform helps to keep patient records, tracking their activities and create/adjust exercise plans remotely. HIPPA compliant encryption.

Speech therapy/rehabilitation settings with high patient loads, please contact us for custom partnership opportunities.
